UNIVERSITY OF GEORGIA

SUMMARY

Postsecondary educational attainment pays off. Work-life earnings increase substantially with each step up in postsecondary educational attainment, a finding that holds for both Georgia and the nation as a whole. Graduates of the University System of Georgia (USG) in 2019 who work in Georgia can expect lifetime earnings of \$170 billion, of which \$59 billion (35 percent) represents the incremental work-life earnings that can be attributed to their degrees. On average, that amounts to an additional \$888,563 in work-life earnings per graduate. More specifically, higher education credentials increase the work-life earnings of the median Georgia resident by \$183,475 (certificate), \$415,570 (associate), and \$1,211,615 (bachelor's degree). Beyond a bachelor's degree, a master's degree is worth \$211,305 and a professional degree is worth \$1,017,155. Finally, a PhD increases work-life earnings by \$643,385 over a master's degree.

It should be noted that work-life earnings estimates based on Georgia-specific earnings data are lower than those based on earnings data for the nation as a whole. Both sets of estimates are presented in this report, but to ensure relevance to Georgians, the emphasis is on the Georgia-based earnings estimates.

HIGHER EDUCATION AND WORK-LIFE EARNINGS

From the perspective of the students and their families, perhaps the most relevant measure of the economic “worth” of a college education is increased earnings over a working lifetime. Accordingly, on behalf of the Board of Regents, the Selig Center prepared estimates of work-life earnings by level of educational attainment for Georgia and the U.S. Of course, the increase in earnings associated with a degree will vary from one person to another, over time, geographically, and by field of study. It is possible, however, to provide a rough approximation of the aggregate benefits to the USG’s 2019 graduates, as well as benefits accruing to the average degree holder. The estimates are important because they show to what extent higher education pays off, which may motivate students, employers, workers, and policymakers to pursue and support postsecondary education.

This report presents work-life earnings estimates for the 65,978 graduates of the USG who received professional, doctoral, master’s, bachelor’s, associate degrees or certificates in FY 2019. The USG provided counts of those who earned degrees or certificates. These are not unduplicated counts, however, implying there is some double counting of persons who earned multiple degrees. Also, it’s important to note that, due to data limitations, this report excludes work-life earnings estimates for 729 graduates who received advanced certificates or for 1,147 graduates who received Education Specialist degrees.

■ Estimating Work-Life Earnings ■

The Selig Center’s synthetic work-life earnings estimates are based on median personal earned income (earnings) data from the U.S. Census Bureau’s most recent five-year American Community Survey (2014-2018). The estimates therefore are based on earnings gathered over a particular period rather than longitudinal earnings data for 40 years of individuals’ work-life. We use the five-year ACS because it increases statistical reliability enough to allow for investigation at the state-level by gender, race, and Hispanic origin. The dollar amounts are in 2018 dollars. The typical work-life is defined as the 40-year period between age 25 and 64. Our work-life earnings estimates are for people who maintain full-time (35 or more hours per week), year-round (50-52 weeks per year) employment. Those who do not maintain full-time, year-round work, or who do not work, will earn considerably less over the course of their working lives.

The Selig Center calculates work-life earnings using the method described by the Census Bureau’s Economic and Statistics Administration’s “Work-Life Earnings by Field of Degree and Occupation for People with a Bachelor’s Degree: 2011 (ACSB-11-04).” Specifically, we calculate synthetic work-life earnings for Georgia and for the U.S. by estimating the median earnings for each group of the population engaged in full-time, year-round work: ages 25-29, 30-34, 35-39, 40-44, 45-49, 50-54, 55-59, and 60-64. These estimates are multiplied by 5 to represent the expected amount of money earned in that stage of life. The five-year earnings estimates are added together to represent 40 years of earnings.

The totals represent what individuals within each group with the same education level could expect to earn, on average, in 2018 dollars, during a hypothetical 40-year working life. The estimates are illustrative and do not predict any individual’s actual future earnings.

The incremental/additional impacts on work-life earnings are calculated for each step in educational attainment. Incremental work-life earnings for people with an associate degree are the difference in synthetic work-life earnings between people with a high school diploma and those with an associate degree. Incremental work-life earnings for bachelor’s degree holders are the difference in synthetic work-life earnings between people with a high school diploma and a bachelor’s degree. Incremental work-life earnings for people with a master’s degree are the difference in synthetic work-life earnings between people with a bachelor’s degree and a master’s degree. Incremental work-life earnings for people with PhDs are calculated as the difference in synthetic work-life earnings between people with a master’s and a PhD. Incremental work-life earnings for people with a professional degree are the difference in synthetic work-life earnings between people with a bachelor’s degree and a professional degree.

The FY 2019 estimates presented in this report update those presented for 2017 in *The Promise of Potential: Advancing Georgia’s Economic Future Through Postsecondary Education*, a report to the Bill & Melinda Gates Foundation that was published by the University of Georgia’s Selig Center for Economic Growth in December 2019.

FINDINGS

As expected, work-life earnings increase dramatically with education level (see Table 1). The additional, incremental work-life earnings per degree also are reported in Table 1. For each USG institution, synthetic work-life earnings of all graduates are estimated by multiplying the number of degrees conferred by estimated synthetic work-life earnings per degree (see Table 2). The table also reports incremental work-life earnings of all graduates, which are estimated by multiplying the number of degrees conferred by estimated incremental work-life earnings per degree.

Synthetic work-life earnings increase substantially with each advanced college degree, and that is true for both Georgia and the nation as a whole. Although the payoff from postsecondary education is considerable, synthetic estimates of work-life earnings are lower for Georgia than for the U.S. That is true for all levels of educational attainment, but stepping up from a high school diploma to a bachelor's degree yields a larger percentage increase in work-life earnings in Georgia than in the U.S. as a whole. Less positively, going from a bachelor's degree to a master's, professional degree, or a PhD yields smaller percentage increases in work-life earnings in Georgia than in the nation as a whole, but the payoff is still substantial. In sum, higher education pays off, especially for high school graduates who obtain a bachelor's degrees.

On average, each advanced degree boosts individuals' work-life earnings. In Georgia, the work-life earnings of individuals with an associate degree will be \$415,570 more than for those with a high school diploma. The work-life earnings of Georgians with a bachelor's degree will be \$1,211,615 more than for those with a high school diploma, which exceeds the \$1,195,015 incremental benefit estimated for the U.S. So, high school graduates who obtain a bachelor's degree will boost their work-life earnings in Georgia by 87 percent, which exceeds the 79 percent increase estimated for the nation as a whole.

In Georgia, the estimated payoff in terms of work-life earnings for people who go to graduate school is positive, but smaller than estimated for the U.S. For example, Georgians who earn a master's degree will boost their work-life earnings by only \$211,570, or 8 percent, which pales in comparison to the \$443,170 (16 percent) increase in work-life earnings estimated for the U.S. as a whole. In Georgia, additional work-life earnings for individuals with a professional degree are \$1,017,155, or 39 percent more than for those with a bachelor's degree. For the nation as a whole, the payoff between a bachelor's degree and professional degree is almost twice as large, \$1,905,550. In Georgia, the increase in work-life earnings for those who earn a PhD compared to a master's degree is \$643,385; for the U.S. as a whole, the estimated payoff is \$754,955.

■ Work-Life Earnings for the Class of 2019 ■

Based on work-life earnings estimates for Georgia, the analysis shows that 2019's USG graduates can expect work-life earnings of \$170 billion, which is \$59 billion more than they could expect to earn had they not gone on to college and graduate school. Thus, in terms of incremental (additional) work-life earnings, the collective worth of the degrees granted by USG is \$59 billion, or \$888,563 per graduate. Obviously, the economic worth of a postsecondary education over the course of a graduate's working life is considerable.

The 1,637 persons who received a certificate account for less than 1 percent of the collective increase in work-life earnings. In Georgia, the work-life earnings of graduates with a certificate will be \$183,475 more than for persons with a high school diploma. The 7,276 who received associate degrees will account for 5 percent of the collective increase in work-life earnings. On average, in Georgia, the work-life earnings of associate degree holders will be \$415,570 more than for persons with a high school diploma. The 41,701 persons who earned a bachelor's degree will account for 80 percent of the collective increase in work-life earnings. On average, the work-life earnings of those with a bachelor's degree will be \$1,211,615 more than for a high school graduate. The 12,664 master's degree holders will account for 9 percent of the collective increase in work-life earnings, and over an average career, will earn \$211,305 more than persons with only an undergraduate degree. The 1,729 PhDs will account for 2 percent of the collective increase in work-life earnings, accruing \$643,385 more on average than those with a master's degree. Professional degree holders will account for 3 percent of the collective increase in work-life earnings, and will have \$1,017,155 more than someone with only a bachelor's.

Although average earnings rise considerably with educational attainment, individual earnings within each specific education level can vary substantially. These differences result from a variety of factors, including field of study, occupational choice, labor force experience, and geographic location. Nonetheless, most USG graduates at every level will realize significantly higher work-life earnings.

CONCLUSION

Postsecondary education pays off for USG graduates. Work-life earnings estimates for Georgia show that the Class of 2019 can expect to realize work-life earnings of \$170 billion, of which \$59 billion (35 percent) represents the incremental work-life earnings that can be attributed to their degrees. That amounts to an additional \$888,563 in work-life earnings per graduate. On average, that's what a postsecondary education is worth. Moreover, the incremental work-life earnings based on data for the nation as a whole are even higher—an additional \$939,124 per graduate. ■
